

Static numpad

The static numpad in cases where a numpad is always visible (unlike the virtual keyboard which is hidden when no input is in focus, or if a wired keyboard is connected). The static numpad has a connected **textInput** where the keypresses go to.

Numbers

a #0091e5
a #ffffff
A] ExtraLarge Text (t.xl)
aaa light (25)

ABC...WXYZ
a #474747
A] Small Text (t.s)
aaa light (25)

The keypad is visually centered on the horizontal axis, not mathematically. If we mathematically center either the numbers or the full keypad it looks wrong.
